About Classic Stone

Classic Stone features a wide range of elegant planters, water features and furniture that were originally designed by Tim Lewis. Each piece is manufactured from a reconstituted stone material and is handcrafted to achieve a high-quality finish.

Original forms are crafted from plaster and wood. Moulds are taken and these are used to produce each piece. The reconstituted stone medium is placed into the moulds and then reinforced with a high strength fibre cement material. Later, each item is treated to create a finish that is unique to the individual product. As with any natural material, there are subtle variations in the surface texture and colour, enhancing the range's handcrafted yet sophisticated appeal.

The manufacturing process allows each piece to have the appearance of natural stone as well as exceptional strength, without the disadvantage of excessive weight. The reconstituted stone forms the actual product and as it is not just a surface finish or a painted effect; the material will not wear, chip or flake off with exposure to the elements. Each piece will weather with time. Cracking or hairline cracking are part of this natural process; it is a surface phenomenon and does not affect the reinforcing structural material.

All our planters are internally waterproofed to reduce water penetration and consequent surface mineral staining. They all have drainage holes.

The Classic Stone range is designed and manufactured in Cape Town and is distributed countrywide in South Africa and internationally.

PLANTER ACCESSORIES

Drip Trays

Our standard drip tray is the same size as the base of the planter. The planter stands on top of the drip tray. This maximises the amount of water that the drip tray can hold and it prevents the planter from being stained by the water in the drip tray.

ROUND

SQUARE

RECTANGULAR

FEET

Feet raise the planter off the floor and facilitate easy drainage and cleaning
